Internet Update Guidelines

SETUP REQUIREMENT
- Go to the C 658 product page at www.nadelectronics.com and download the corresponding owner’s manual.
- Refer to the “QUICK SETUP GUIDE” section in the owner’s manual for wired or wireless setup connection.

IMPORTANT!
- For wired or wireless connection to be established, ensure that a broadband router that supports Ethernet and/or Wi-Fi standard is setup and available.
- During upgrade process, the front panel display will appear inactive or have no display - this is normal. Do not interfere and let the upgrade process run its course.
- The new firmware update may be applicable only for one section. For example, if the firmware update is applicable only to MCU, then only MCU firmware details will reflect changes.
- Firmware version details shown are for reference only.
- This Internet Update Guideline is subject to change without notice. Check the C 658 product page for the latest Internet Update Guideline.

HOW TO INITIATE INTERNET UPDATE
With wired or wireless connection firmly established and the C 658 at operating mode, press <, > or ENTER front panel controls or corresponding remote control keys. Select highlighted items.

UPGRADE AVAILABLE
